// SUMMARY

CS Engineering grad (AIUB, 2024) who built **Playwright/TypeScript automation suites** and **Maestro mobile flows** across 4 enterprise products in under a year — enterprise HR, premium mobile therapy, AI agent provisioning, and FCA-regulated fintech. **200+ pre-UAT bugs** · **1,000+ test cases** · **95 Playwright specs**. AI-augmented QA workflow using Claude Code agents for test generation and risk prediction.

// EXPERIENCE

Tulip Tech

QA Engineer

Dhaka, Bangladesh

2024 – Present

- Built and own **4-tier POM Playwright suites** — 1,000+ test cases across 4 concurrent enterprise products. Zero raw selectors in spec files, synthetic JSON data, Allure centralized.
- 200+ critical defects pre-UAT** — Rota Engine multi-tenant payroll bug, offline-sync data-loss, Docker socket lifecycle edge case, FCA regulatory gaps.
- Apply **10-layer test design** (UI, positive/negative, edge, network, lifecycle, RBAC, input validation, push notifications, E2E) — catches defect classes happy-path suites miss.
- FCA/AML/KYC compliance testing** on a UK-regulated remittance app — 7 hard regulatory requirements mapped, gated, and verified with MLRO-reviewed evidence trails.
- QA for **AI agent provisioning platform** (Docker-in-Docker, SSE streaming, WebSocket terminal, 4 OAuth PKCE flows) — Docker socket edge case caught pre-launch.
- Centralized Allure + TestRail reporting** across 4 products; TypeScript custom reporter for automated sync; replaced per-project scatter with single QA hub.

// KEY PROJECTS

Workforce Management Platform

UAT COMPLETE

- 95 Playwright specs** — Agency Portal, Time-Presence, Rota Engine, Insights
- Rota Engine bug pre-UAT — multi-tenant payroll recomputation prevented
- Offline-sync data-loss vector caught via 10-layer edge case coverage
- Python seed scripts · 4-tier POM · Allure hub

Premium Wellness Booking App (London)

PRE-LAUNCH

- 829 test cases** — Web Admin (~200) + Mobile (629)
- Maestro flows: push notifications, biometric auth, offline behavior
- 4 Stripe/VAT interaction bugs found in first integration pass
- Role separation: therapist-impersonation vector caught in admin endpoints

AI Agent Provisioning Platform

ACTIVE

- 245 test cases** across 2 TestRail suites (full + deployment regression)
- Docker lifecycle, SSE stream integrity, WebSocket terminal coverage
- AES-256-GCM encryption at rest · 4 OAuth PKCE provider flows
- xterm.js text/binary frame bug surfaced pre-launch by WebSocket tests

FCA-Regulated Remittance App (UK)

ACTIVE UAT

- FCA Consumer Duty, EDD threshold, audit log compliance gating
- KYC / CDD / AML — MLRO-reviewed requirement mapping
- 7 hard regulatory requirements mapped with evidence trails
- Go-live: June 2026
