SUMMARY

QA Engineer engaged across the SDLC — requirement gathering, test planning, execution (manual + automated), bug filing/retest, and QA sign-off. CS Engineering graduate (AIUB, 2024). Career transition: started in network support (Race Online, Jun 2024–Nov 2025), moved into QA at Tulip Tech (Dec 2025–present) — structured troubleshooting discipline from network diagnostics carried into defect investigation.

In first 9 months, built 1,000+ test cases in TestRail across 4 concurrent client products spanning **fintech** (FCA-regulated remittance app — KYC/AML/RBAC compliance QA) and **healthcare-adjacent** (premium therapy booking platform — payment/booking integrity, patient data handling), plus enterprise HR and an AI agent platform. Runs an AI-driven QA workflow throughout — AI-assisted requirement harvesting, test plan/case generation, and failure triage — the workflow behind that pace, without cutting coverage.

Combines structured manual test design (10-layer coverage) with visual/design QA against Figma specs, and automation where it pays off. Test data in JSON not hardcoded strings; edge cases treated as main characters.

CORE SKILLS

Manual Testing

Test case design (10-layer: UI/functional/negative/edge/network/lifecycle/permissions/input/push/E2E), exploratory, regression, bug reporting & retest

Test Automation

Playwright, TypeScript, visual regression testing, component testing, serial suite isolation

Test Management

TestRail (case authoring, run management, RTM), Jira, Confluence, Allure reporting

Figma / Design QA

Design-to-build comparison, visual regression analysis, spec-vs-build discrepancy flagging, component/token audits

Mobile Testing

Maestro, React Native QA, iOS & Android, push notification, biometric auth, offline behavior testing

Security Testing

RBAC & permission testing, OAuth flow validation, auth boundary testing, multi-tenant isolation

Domain — Fintech & Healthcare

FCA / KYC / AML compliance QA, payment/booking integrity testing, patient/financial data handling QA

AI-Driven Testing

AI-assisted test plan generation, case/script authoring, failure triage, risk prediction, Claude Code QA agents, MCP-driven workflow

SDLC Engagement

Requirement gathering & analysis, test planning, requirement harvesting (Jira/Confluence/Figma), execution, bug filing & retest, QA sign-off, release readiness

API & Performance

Postman, Newman, k6 (load/stress/performance testing), REST API, WebSocket, SSE stream testing

Browser & DevTools

Chrome DevTools, network inspection, Playwright trace viewer, Lighthouse audits (accessibility/a11y + performance), console error monitoring

CI/CD & DevOps

GitHub Actions, Docker, Docker Compose, Git

Methodologies

4-Tier POM architecture, 10-layer test design, risk-based testing, BMAD (Build-Measure-Adjust-Deploy) sprint QA, shift-left QA

Languages

TypeScript, JavaScript, Python, Bash

Databases

MySQL, PostgreSQL, SQLite, MongoDB

EXPERIENCE

QA Engineer — Tulip Tech

Dhaka, Bangladesh | Dec 2025 – Present

- In first 9 months, built and maintain 1,000+ manual test cases in TestRail across 4 concurrent client products — throughput driven by an AI-augmented workflow (AI-assisted case/script generation, failure triage) layered on a 10-layer test-design approach.
- QA an FCA-regulated fintech remittance app (KYC/AML compliance flows, RBAC, multi-tenant isolation) and a premium healthcare-adjacent therapy booking platform (payment/booking integrity, patient-data-handling flows).
- Run Figma-vs-build design QA — flag spec/build discrepancies before they ship, not after.
- Contribute to 4-tier POM Playwright automation suites (95 specs) layered on top of the manual case base for regression coverage.
- Set up centralized Allure reporting + TestRail integration, replacing scattered per-project results with a single source of truth used across all active products.
- Run risk-weighted sprint QA (BMAD — Build-Measure-Adjust-Deploy cycle) with shift-left coverage — caught a Rota Engine defect pre-UAT that would have triggered weeks of erroneous payroll recomputation.
- Cover each ticket across the SDLC: requirement gathering → test plan → execution → bug filing → retest → QA sign-off, using an AI-driven workflow to compress cycle time.

Impact (first 9 months): 200+ critical defects caught pre-UAT | 95 Playwright specs authored | 1,000+ test cases in TestRail | 4 client platforms covered

Junior Support Engineer — Networking — Race Online Limited

Dhaka, Bangladesh | Jun 2024 – Nov 2025

- Provided first/second-line network support — diagnosed and resolved connectivity, LAN/WAN, and hardware issues (routers, switches, access points) for internal/client infrastructure.
- Monitored network uptime and performance, escalated unresolved incidents per SLA, and maintained ticket documentation for recurring-issue tracking.
- Supported network configuration and maintenance tasks (IP addressing, VLANs, basic firewall/router config) alongside day-to-day troubleshooting.
- Logged and triaged support tickets end to end — root-cause diagnosis, fix, verification, closure — building the structured troubleshooting discipline that carried directly into QA defect investigation.

SELECTED WORK

Workforce Management Platform

Enterprise HR · UK Agencies · UAT Phase

Pre-UAT hardening on a UK enterprise workforce platform. 95 Playwright specs across Agency Portal and Time-Presence modules — RBAC, Rota Engine, offline clock-in/out.

Stack: Playwright, TypeScript, Python, TestRail, Jira, Allure

AI Agent Provisioning Platform

AI Platforms · Docker · Multi-Tenant · Active

245 test cases across 2 TestRail suites for an AI agent provisioning platform — users spin up personalized AI assistants via wizard, deploy as isolated Docker containers, manage via web dashboard.

Stack: Playwright, TypeScript, TestRail

Wellness Booking App

Mobile · Premium Therapy · Pre-Launch

Launch-readiness for a premium mobile therapy booking app (London market) where a missed payment bug means charging without booking. 829 cases across Web Admin (~200) and Mobile (629).

Stack: Playwright, Maestro, Postman, TestRail, TypeScript

SQA Fundamentals Portfolio

Manual Testing · API · Automation · Public

Public QA portfolio built during SQA training — manual test case writing, API testing with Postman, load testing with JMeter, web automation with Playwright.

Stack: Playwright, Postman, JMeter, Jira

EDUCATION

Bachelor of Computer Science & Engineering — AIUB, Bangladesh

Aug 2018 – Jan 2024 | CGPA 3.39 / 4.00

Software Quality Assurance (SQA) — 3-month training, Bug Resistance

Jan 2024
