✓ 200+ CRITICAL BUGS PRE-UAT

✓ 1,000+ TEST CASES IN TESTRAIL

✓ 4 ENTERPRISE PLATFORMS

✓ 95 PLA SPE

// SUMMARY

CS Engineering grad (AIUB, 2024) who built **Playwright/TypeScript automation suites and Maestro mobile flows** across 4 enterprise products in under a year — enterprise HR, premium mobile therapy, AI agent provisioning, and FCA-regulated fintech. AI-augmented QA workflow using **Claude Code agents** for test generation, failure triage, and risk prediction.

// EXPERIENCE

Tulip Tech

QA Engineer

Dhaka, Bangladesh

2024 – Present

- ✓ **7 critical defects caught pre-UAT** — incl. Rota Engine bug that would have triggered erroneous payroll recomputation across multiple tenants; offline-sync data-loss vector.
- Built and own **4-tier POM Playwright suites covering 1,000+ test cases across 4 concurrent products** — zero raw selectors in spec files, synthetic JSON data, Allure results centralized.
- Apply **10-layer test design** (UI, positive/negative, edge, network, lifecycle, RBAC, input validation, push notifications, E2E) — catches defect classes happy-path suites miss.
- ✓ **FCA/AML/KYC compliance testing** on a UK-regulated remittance app — 7 regulatory hard requirements mapped, gated, and verified with evidence trails.
- QA for an **AI agent provisioning platform** (Docker-in-Docker, SSE streaming, WebSocket terminal, 4 OAuth providers) — Docker socket lifecycle edge case caught pre-launch.
- Set up **centralized Allure + TestRail** replacing scattered per-project results with a single cross-product reporting hub; TestRail custom reporter in TypeScript.
- AI-augmented workflow: **Claude Code agents** for test generation, MCP-driven automation, Obsidian Second Brain for concurrent-sprint knowledge management.

// KEY PROJECTS

Workforce Management Platform

UAT COMPLETE

- **95 Playwright specs** — Agency Portal, Time-Presence, Rota Engine
- **7 critical bugs** caught pre-UAT incl. offline-sync data-loss
- Python seed scripts · 4-tier POM · Allure hub

Premium Wellness Booking App (London)

PRE-LAUNCH

- **829 test cases** — Web Admin + Mobile (Suites 144+145)
- Maestro: push notifications, biometric auth, offline flows
- Price-calc matrix caught 4 Stripe/VAT interaction bugs

AI Agent Provisioning Platform

ACTIVE

- **245 test cases** — 2 TestRail suites (full + deployment regression)
- Docker lifecycle, SSE streaming, WebSocket terminal
- AES-256-GCM encryption · 4 OAuth provider PKCE flows

FCA-Regulated Remittance App (UK)

ACTIVE UAT

- FCA Consumer Duty, EDD threshold, audit log compliance
- KYC / CDD / AML layers — MLRO-reviewed requirements
- Go-live: June 2026
